

MEDICAL Keyboard and Mouse

The **PENTA Medical keyboard and mouse** is special developed for the use in hygiene-sensitive ranges, like medical facilities, Operation Theatres (surgery, anesthesia, radiology) and intensive care units. It is an disinfectable and washable, completely closed input devices (enclosure IP65) and because of the smooth key form the keyboard is easy to clean.

High control comfort, good mechanical stability as well as the high-quality silicone surface distinguish this keyboard for medical use.

The **PENTA Medical mouse** is based on the optical principle and its silicone upper section is manufactured from one piece, so that a penetration of dust or liquid (also at the mouse buttons) is excluded.

The **PENTA Medical mouse** is equipped with five buttons and therefore also has the Scroll-function.

Technical Details: PENTA Medical Keyboard and Mouse

Keyboard details ::
